Easy Clean Standard

Easy Clean je nevidna polimerska zaščitna plast, ki se na steklo nanese v fazi proizvodnje. Zaradi svoje vodoodbojne lastnosti kapljice, ki nastanejo na steklu, ne pustijo sledi. Tudi notranja stran stekel je obdelana in tako zaščitena pred obrabo in korozijo.

V nasprotju z neobdelanimi stekli tako preprečuje nabiranje umazanije na steklu in pojava plesni. Za optimalno zaščito bi bilo potrebno Easy Clean premaz ponovno nanesti vsakih 3 do 6 mesecev. Celoten program Sanoflex je obdelan z Easy Clean premazom.

Zavira nastanek vodnega kamna
Olajša čiščenje steklenih površin
Preprečuje nabiranje umazanije na steklenih površinah
