Kol.	Opis
	The pump is of the canned-rotor type, which means that the pump and motor form an integral unit. The bearings are lubricated by the pumped liquid ensuring maintenance-free operation. The pump features dry-running protection.
	The pump has a ceramic shaft and radial bearings, carbon thrust bearing, stainless-steel rotor can, bearing plate and rotor cladding, composite impeller, all of which contribute to long life.
	The pump is self-venting through the system, which contributes to easy commissioning. The compact design featuring pump head with integrated control box and control panel fits into most common installations.
	The pump housing is made of cast iron and electrocoated to improve the corrosion resistance.
	The motor is a synchronous permanent-magnet/compact-stator motor characterized by high efficiency. The pump speed is controlled by an integrated frequency converter incorporated in the control box.
Teknična podlaga:	
Temperatura tekočine:	Voda
Razpon temperature tekočine:	2 .. 110 °C
Temperatura med delovanjem:	60 °C
