

## Valves for radiators and accessories 07

07

Installation of thermostatic and thermo-electric heads is very simple. It can be carried out by removing the handle and the plastic component.

Unscrew the handle (1), insert the green extractor on the stainless steel pin (2) and re-screw the handle (3). In this way it is possible to remove the handle and the plastic component without damaging them in order to install the desired head.

It is possible to replace the sealing O-ring within the body of the valve without draining down the system.

The nominal diameter and the water flow direction are indicated on each valve body.

Terminals have a conical thread and are provided with Loctite® Dri-Seal 5061 which guarantees the seal on the standard thread.

CONICAL THREAD WITH LOCTITE® DRI-SEAL® 5061  
SEAT IN HPF

A seal between terminal and body is achieved by means of an HPF seat, which guarantees reliability and durability.

Far offers new unions with rubber sealing that allow installation on radiators without the use of hemp or PTFE sealing.

#### INSTALLATION OVERVIEW

#### INSTALLABLE COMPONENTS

FAR manual valves and lockshield valves are available with iron connection and with interchangeable connections for copper, plastic and multilayer pipe.

For easier installation, FAR offers a special range of spare parts:

Thermostatic valves with presetting allow the water flow to the radiator to be divided by means of a shaped body. They are designed for installation of the thermostatic head.

Adjustment is carried out by removing the handle and rotating the body up to the black reference notch at the desired position (from 1 to 6, plus the 'N' condition of fully open).

The shape of the regulating body allows a default value for flow resistance to be set for each of the calibration positions.

1. Completely unscrew the handle by turning it counterclockwise.

2. Insert the regulating key included in the package by matching the letter N on the key with the one on the valve.

3. Turn the key clockwise or counter clockwise, moving it to the designed value at the reference notch.

4. Remove the key and replace the handle or the thermostatic head.

Thermostatic head with liquid sensor for FAR thermostatic valves.

- Temperature regulation range: from 7°C (\* position) to 28°C (5 position)
- Possibility to lock the head in the desired position.
- Possibility to restrict the setting range.
- Easy installation on the radiator valve.

#### ANTI-TAMPER GUARD for thermostatic head Art.1828

The anti-tamper guard art. 1833 allows to safely lock the FAR thermostatic head art.1828 on the set temperature value and to prevent the removal of the head by unauthorized people.

Set the desired value and lock the temperature by pushing the two pins on the head towards the numbered ring.

**NB: The two pins must always be placed towards the numbered selector in order to install the anti-tamper guard.**

Place the anti-tamper guard in the right position, as shown in the picture.

Check the correct connection of the anti-tamper guard. The indicator must correspond with the desired number position.

Place the locking nut in the seat

Tighten the screw with the Allen key in order to lock the anti-tamper guard.

## THERMO-ELECTRIC HEADS

FAR thermo-electric heads are available in two versions: with auxiliary micro-switch (fig. B) or without (fig. A). These heads are activated or deactivated by a thermostat or a control unit. They are available in 'normally open' or 'normally closed' configurations with 24V or 230V voltage.

Once the handle and the plastic component have been removed, it is possible to install the thermo-electric head as follows:

- 1) screw the adapter (art. 1941) onto the valve body
- 2) assemble the thermo-electric head.

## THERMOSTATIC HEADS

The FAR thermostatic head is provided with a liquid sensor, which detects temperature variations and opens or closes the valve accordingly. It has a regulation scale numbered from 1 to 5 for selecting the desired temperature. Once the handle and the plastic component have been removed, it is possible to install the thermostatic head as follows:

1. position the selector on 5
2. fix the head on the valve body in the appropriate grooves
3. press the locking ring towards the valve to complete installation

The temperature selector can be locked on a particular value by using the locking key.

When installing thermostatic heads for use in systems serving public areas, an anti-tamper guard (art. 1832) is available.

Max. differential pressure:	1 bar
Reference point:	3 = 20° C
Max. room temperature:	50° C
Temperature range:	7-28° C
Antifreeze operation:	7° C
Hysteresis:	0,35 k
Response time - point 6.4.1.13 EN215:	23 min

To guarantee correct temperature sensing and regulation - even in situations where radiators are affected by other constraints within the room - FAR offers two other systems for detecting room temperature:

Art. 1800

### Main features:

- Thermostatic head with liquid sensor
  - Remote selector numbered from 1 to 5
  - Length of capillary: 2 m
  - Temperature range: 7° ÷ 28° C.
- (Values for temperatures are standard on all thermostatic models - see listing in the table for art. 1824)

Art. 1810

### Thermostatic head with sensor and graduated scale for selection of remote temperature value.

The sensor, which features a graduated temperature scale, is placed on the wall within 2m of the radiator. It should be located in an open area with no barriers to free movement of room air. This product is suitable for use with radiators located in recesses, concealed within decorative cabinets, or behind curtains of thick material where free circulation of room air is inhibited.

### Thermostatic head and remote sensor.

The sensor is placed at a maximum distance of 2m, usually on the skirting board under the radiator, in such a way as to be in the airflow drawn across the radiator or convactor as this will provide an average of the room air temperature of room air as a whole.

### SPACE-SAVING RADIATOR VALVES AND LOCKSHIELD VALVES

FAR offers various smart solutions to adapt to the available space. In case of a designer radiator, angled valves and lockshield valves can be installed in order to make the most of the space. The valve must be installed on the delivery line to the radiator and has to be selected according to the desired handle position, considering the radiator front view. In the example picture you can see a right-angled valve (art.1671), so that the handle or the thermostatic head are oriented to the right, once the valve is installed on the radiator.

### SINGLE-DOUBLE PIPE VALVES

In case the system requires the installation of a single-double pipe valve, FAR offers right-hand and left-hand angled valves with adjustable by-pass. The valve must be installed on one side of the radiator and has to be selected according to the desired handle position, considering the radiator front view. In the example picture you can see a right-hand valve (art.1436), so that the handle or the thermostatic head are oriented to the right, once the valve is installed on the radiator.

### SINGLE-DOUBLE PIPE VALVES 50mm CENTRE DISTANCE

In case the radiator has connections with 50mm centre distance, a special single-double pipe angled valve with adjustable by-pass can be installed. Two types of adapters are available to connect the valve, according to the radiator connection. In the example picture you can see an angled valve (art.1482) with 24x19 FAR connection.

**INSTALLATION ADVICE FOR A BETTER SENSITIVITY OF THE THERMOSTATIC SENSOR**

In case of a single pipe valve with thermostatic head installed in a wall recess, the regulation could not be correct due to the sensor proximity to the heating body.

For a better regulation it is possible to install on the valve the thermostatic head with angled swiveling adapter (art.1834), which allows to direct the temperature sensor in order to improve the sensitivity. This adapter can be installed on any FAR thermostatic valve.

In case of any obstacles near the radiator (like curtains or other furnishing elements) it is necessary to install a thermostatic head with remote sensor (art.1800) in order to have a correct temperature detection and consequently an effective regulation.

## INSTALLATION

The circuit is characterized by having a supply and a return pipe for each radiator.

The example shows a circuit with three radiators with valves Art.1457 and distribution manifolds in box for supply and return.

### Installation overview

SUPPLY RETURN

The lockshield valve calibration, by means of a 5 Allen wrench or a screwdriver, allows the water flow to the radiator to be adjusted. The picture shows flow with valve open. By closing the lockshield valve there is no water passing inside the radiator.

Handle for opening and closing of water flow to radiator  
(Possibility of installing the thermostatic control Art.1824)

Lockshield valve for circuit balancing

Chrome-plated manual MONOSTILE valve for single-pipe systems.

- interchangeable sizes for copper, plastic and multilayer pipe
- 450 mm Ø 12 mm metal probe
- centre distance between ports: 35 mm
